

Our corporation " KEDR " is supplier of laminated log of high quality.

We manufacture laminated wall logs, structural ceiling beams, bend-glued component for low-rise housing constructions, and also for complex facilities and industrial constructions.

As raw material for manufacture we use northern wood: a cedar, an Angarsk pine, a larch, all of it is growing in ecologically pure zone.

Production capacity allow the plant to let out up to 1500M³ finished goods monthly.

During the acceptance the board is checked in strict conformity with specifications of our factory. For drying wood, we use 8 completely automated drying air system chambers of Muhlbock company(Austria). Laminated log moves on automatic machining line LOGMATIC (Macron, Finland) for machining details. It significantly improves manufacture accuracy.

As a result, you receive walls details, overhead cover, beams, trusses, rafters, framework elements with precision factory tenonig.

Due to its capable of offering tailor-made solution highly innovative structures can be realized.

Our factory has International Certificates that allow us to work with foreign customers.

We take care of all logistical problem. Our experts will offer the best route and mode of transport. Our colleagues work as skilled highly professional team of well-educated specialists of assembling log houses.

Our basic principles:

- the price must be always fair and open!
- using only totally proven technology and strictly comply with normative documents!
- control conditions and contract deadlines!
- building both for ourselves!
